Purpose

To develop an automated segmentation algorithm for the detection:

Cystoid macular edema (CME)

Central serous chorioretinopathy (CSR)

Age- related macular degeneration (AMD)

- Retinal drusen
- Macular Neovascularisation

Vitreomacular interface abnormalities (VMA)

- Full-Thickness macular hole
- Lamellar macular hole
- Vitreomacular Traction
- Epiretinal membrane

Methods

Materials:

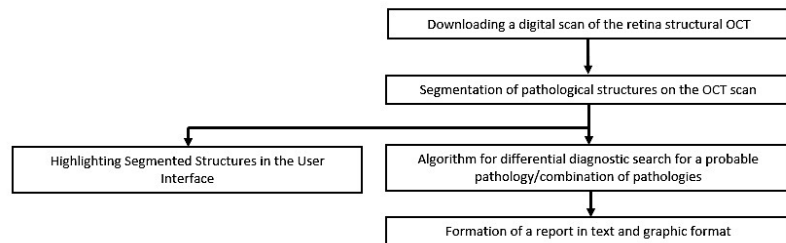

Training dataset 14000 OCTs; testing dataset 1000 OCTs

Artificial neural network model:

Feature Pyramid Network (FPN), EfficientNetB0, CenterNet

Following pathological signs were segmented:

intraretinal (IRF)&subretinal (SRF) fluid, retinal pigment epithelial detachment (PED), subretinal hyperreflective material (SHRM), retinal drusen (RD), epiretinal membrane (ERM), vitreomacular traction (VMT), lamellar (LMH)&full-thickness (FTMH) macular hole.

Results: Estimation of accuracy parameters of the algorithm on the validation database

ROC AUC Full thickness macular hole

ROC AUC SHRM

ROC AUC Vitreomacular traction

ROC AUC Intraretinal cysts

ROC AUC Subretinal fluid

ROC AUC Retinal drusen

ROC AUC RPE detachment

ROC AUC Epiretinal membrane

ROC AUC Lamellar macular hole

ROC curves and AUCs for each of segmented pathological sign

Results:

Example of segmentation and reporting by pathology.

Macular Neovascularisation

	Detection
Intraretinal Cysts	Detected
Subretinal Fluid	Detected
Retinal Pigment Epithelium Detachment	Detected
Subretinal Hyper-Reflective Material	Detected
Retinal Drusen	Not detected
Epiretinal Membrane	Not detected
Full Thickness Macular Hole	Not detected
Lamellar Macular Hole	Not detected
Vitreomacular traction	Not detected

Differential Diagnosis*

Features	Possible Pathology					
	Cystoid Macular Edema/Diabetic Macular Edema	Age-related Macular Degeneration (Dry Form - Retinal Drusen)	Macular Neovascularization	Epiretinal Membrane	Central Serous Chorioretinopathy	Vitreomacular traction

Results: Example of segmentation and reporting by pathology.

Age-related Macular Degeneration/ Epiretinal Membrane

Original OCT-scan

Segmented signs

Differential diagnostic search report

	Detection
Intraretinal Cysts	Not detected
Subretinal Fluid	Not detected
Retinal Pigment Epithelium Detachment	Not detected
Subretinal Hyper-Reflective Material	Not detected
Retinal Drusen	Detected
Epiretinal Membrane	Detected
Full Thickness Macular Hole	Not detected
Lamellar Macular Hole	Not detected
Vitreomacular traction	Not detected

Differential Diagnosis*

	Cystoid Macular Edema/Diabetic Macular Edema	Age-related Macular Degeneration (Dry Form - Retinal Drusen)	Macular Neovascularization	Epiretinal Membrane	Central Serous Choroidopathy	Full Thickness Macular Hole	Lamellar Macular Hole	Vitreomacular traction
Features

Conclusion

The highly accurate algorithm of automated segmentation of retinal pathological signs was developed. Based on the designed segmentation algorithm we developed a differential diagnosis algorithm for detection of CME, AMD, VMA and CSR, which is currently approbed in a clinical trial.

Preliminary data from clinical trials (n=200)
